Based on computational physics, Energy2D is an interactive, visual multiphysics simulation program that models all three modes of heat transfer—conduction, convection, and radiation, and their coupling with particle dynamics. Energy2D runs very quickly on most computers and eliminates the switches among preprocessors, solvers, and postprocessors typically needed to perform computational fluid dynamics simulations.

NEW Introducing our new Quick Drain coil design to help prevent freeze damage! IHT's experts design the heat transfer solutions you want with the quality you expect. Our continuous plate fin and tube designs will give the highest performance and lowest pressure drop in the most compact area versus other coil heat exchanger types.
